# ELISA VPN CLIENT INSTALLATION

Versio 1.01

elisa

## Installing Elisa Client VPN (Cisco AnyConnect for Windows)

**Step 1:** Uninstall previous version of the VPN client. We recommend that you uninstall any previous version of the VPN Client before you start the installation.

**Step 2:** Download and run the installer file. Two options:

1) Windows Installer package (.MSI): download and run the installer file.

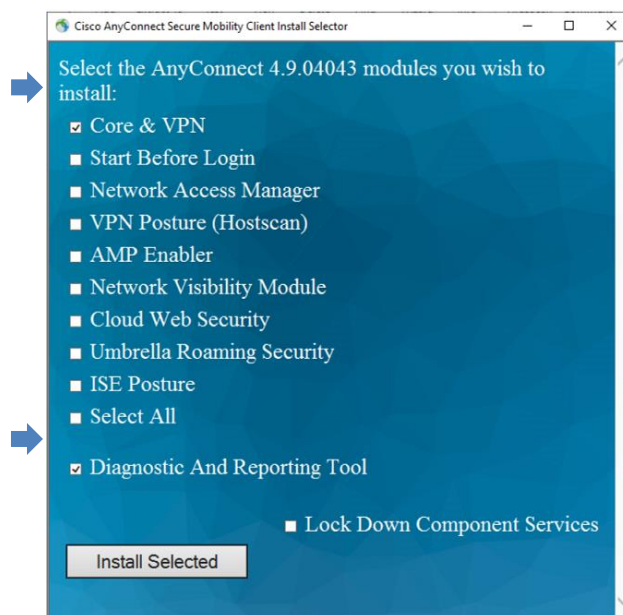

2) Disk file image (.ISO): download the file and extract installation file into folder using 7-Zip or similar file archiver program. Open setup.exe.

### Step 3:

Select the following modules from the Install Selector window.

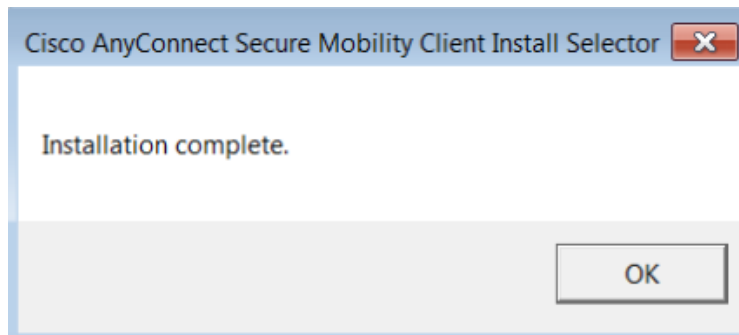

**Step 4:** Installation. After the installation is complete, we recommend you restart the system.

## INSTALLATION STEPS

Elisa VPN Client  
Versio 1.0  
19.1.2021

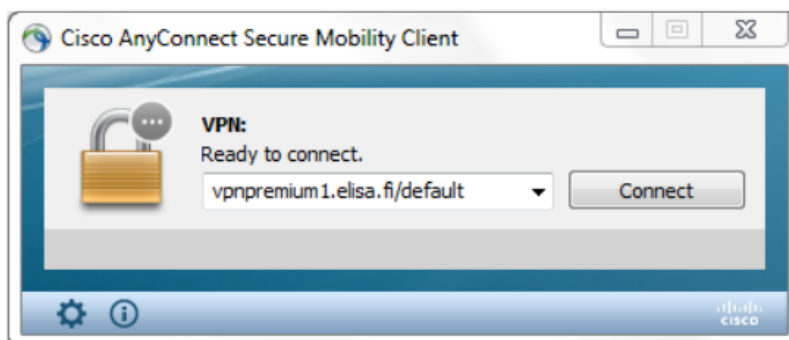

**Step 5:** Launch the client. Locate the Cisco Icon > Click Cisco AnyConnect Secure Mobility Client.

Or Go to Start > All Programs > Cisco > and launch the client application Cisco AnyConnect Secure Mobility Client.

**Step 6:** Type the address of the server: vpnpremium1.elisa.fi/default Click "Connect" to start the VPN session.

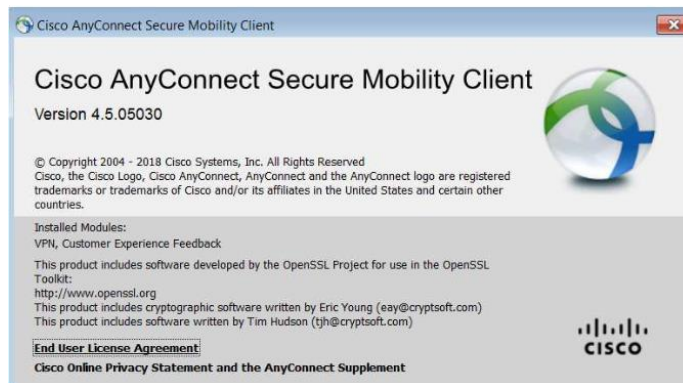

## INSTALLATION STEPS

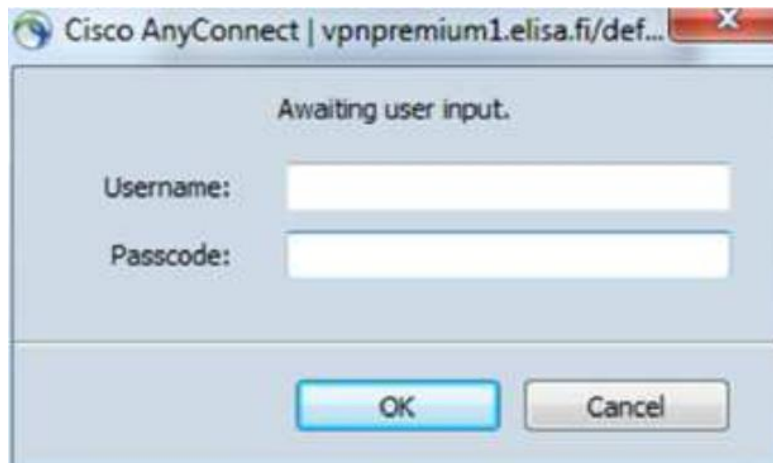

Elisa VPN Client

Versio 1.0

19.1.2021

**Step 7:** Authentication. Username and password supplied by Elisa or your IT-department. Two-factor authentication (e.g. SMS-OTP or token) might be also required.

**Step 8:** Configuration. On first logon the gateway will push the profile settings.

**Step 9:** Connected. You have successfully completed the installation and can now access to your company resources through VPN.
